Requirements for web data base from previous HW5:

1. Change as «Admin» user phone number information of «Teacher 1» from «380634747474» to «380632828282» in DataBase and Login as «Student» user and check the information change on «380632828282»?

2. Login form «Teacher» module and add new «Student» user. Then login as this new "Student" user and get to home page of LMS.

3. From «Admin» module remove the user «Parent 2» from LMS. Then try to log in as «Parent 2» user. The user cannot log in to the system and sees a warning title, that only registered users can login into the system.

Now I will describe three business requirements using Gherkin Language:

Feature 1: Change information about phone number in database.
Background:
      Given: Open the LMS Login page;
      Given: Login as a «Admin» user;
      Given: Go to the Database;
      Given: Select Column «Mobile Phone».
Scenario: Change phone number of «Teacher 1» user in database from «Admin» module.
      Given: Change phone number of «Teacher 1» from «380634747474» to «380632828282».
      When: User «Student» login to the LMS and go to the database.
      Then: See in Database «380632828282» phone number.

Feature 2: Add a new student user.
Background:
      Given: Open the LMS Login page;
      Given: Login as a «Teacher» user;
      Given: Go to the Database;
      Given: Select an empty line for «Student» position.
Scenario: Add from «Teacher» module user called «Student».
      Given: Add user «Student» to the LMS (fill in user information).
      When: User «Student» enters true login and password and clicks on the «Login» button.
      Then: User «Student» logged in to LMS and became on Home page.

Feature 3: Remove a user.
Background:
      Given: Open the LMS Login page;
      Given: Login as a «Admin» user;
      Given: Go to the Database;
      Given: Select «Parent 2» line in «Parents» position.
Scenario: Delete from «Admin» module user called «Parent 2».
      Given: Remove user «Parent 2» from LMS (remove user information).
      When: User «Parent 2» enters true login and password and clicks on the «Login» button.
      Then: User «Parent 2» cannot login to the system.
